VICE PRESIDENT MORTON in the Chair.

DONATIONS TO MUSEUM.

Fine specimen of Fluete of Lime, from Lowville, New York. Presented by Mr. W. M. Rice:

Specimen, of large size, of Sulphuret of Copper, from Pennsylvania. From Dr. James Mease.

Fossil furoid impressions, from Mifflin county, Pennsylvania. Deposited by Dr. Mease.

Professor Johnson communicated some observations in relation to the properties and habitudes of different varieties of coal.

1. He gave the results of some recent analyses of coal, which strongly confirm the position which he had previously advanced, viz.: that in coals from the same coal district, and where that part of the mineral substance which is combustible may be considered as similarly constituted, the *density* of different specimens may be considered as the index to their relative impurity.
